- **OS ABSYS+SAP** provides the industry specific job processing solution in sheet-fed and web press printing: one time and periodic time products, simple and challenging ones.

- Automatic imposition converts product parts to signatures, bill of materials and work plans. Scheduling of time and material consumption is based on that.

- All print specifications of all products are covered by the variant configuration.

- Our results are work plans and bills of material according to SAP ERP standards. Further processing is ensured in all parts of the system.

- By planning table the production jobs are scheduled.
  Presses and other equipment are pre-set and continuously controlled by MDA and JDF. PDA data is collected and booked without operator action required.

- Our technical basis is the SAP data bases from low-cost MaxDB by Oracle to super-fast HANA Enterprise solution.

OS ABSYS+SAP

Our function modules are based on SAP ERP 6.0. According to SAP standard these modules are functional with all upcoming releases of the ERP software.

OS ABSYS+SAP
